

# Construction, Remediation, and Maintenance Services

## PIPELINE INTEGRITY

---

Mears provides safe, cost-efficient and quality construction, maintenance, integrity and engineering services to the owners of underground infrastructure. As the largest contingent of NACE Certified Personnel in the United States, our integrity solutions cover construction, remediation and maintenance services.

**All Mears Construction Foremen are  
AMPP/NACE CP1 certified or better**

**mears**

A QUANTA SERVICES COMPANY

## CAPABILITIES:

- ILL and DA confirmatory digs utilizing our NDT assessment crews as requested
- Cased Pipe solutions including clearing shorts and filling casings
- AC mitigation design, installation (all methods) and commissioning with final testing to ensure quality
- Installation of all methods of cathodic protection including linear anode material on large diameter structures (mostly in high resistivity soils)
- Recoating large and small existing pipelines to improve reliability through improved cathodic protection
- Personnel and equipment to complete all phases of pipeline coating to add additional resistance to corrosion
- Certified to install all manufactures of coating material
- Pipe replacement, pipe and facilities repair, and pipe relocation by inhouse welders and equipment for construction services
- Maintenance methods for all types of pipe including below and above grade coating, painting, pipe repairs and replacements
- In Hole Pipe Analysis: Direct Exam, analysis, reporting and recommendations by a certified technician

**Installed hundreds of miles of linear anode over the last 25 years**
