

# NDE

## PIPELINE INTEGRITY

---

With over 50 certified and trained NDT/ASNT/NACE technicians, our NDE capabilities allow us to perform any testing that our customers require, including material identification and hardness testing among others. Our technicians work across the U.S. on a variety of natural gas, liquids, water, and other facilities to assist customers in meeting PHMSA requirements. By working alongside our dig crews, the excavation and structure analysis can be done with the same crew. This eliminates the need to schedule two different companies, which in turn provides cost and time savings for our customers.
