

# Pipe Type Cable Assessments

## PIPELINE INTEGRITY

---

Mears brings value to our clients by implementing innovative corrosion and integrity services including Pipe Type Cable Assessments. Pipe-type cables, whether high-pressure gas-filled or high-pressure fluid-filled, are subject to the same threats as other underground pipelines. Through our extensive experience with buried pipeline, we developed an approach to evaluate and minimize those threats.

Our pipeline integrity services go above and beyond in meeting our customers' needs. We enhance the safety of every job site while complying with industry standards, best practices and regulations.
